

QuickDelivery is an online food delivery marketplace that connects restaurants to the public, enabling foodies to digitally place orders to their favorite restaurants, and ensuring that quality food is timely delivered through an efficient rider network.

## Features

### Home

All nearby restaurants are previewed on the homepage with their reviews and ratings.

### Order

Simple interface to select favorite food and place an order for the same.

### Track

From order acceptance to delivery, the foodies know the exact status of their order.

### Wallet

No longer a problem if you have paid extra cash to the delivery person as the extra amount will be credited to your wallet.

### Search & Filter

You can search for your favorite restaurants or food through the application.

### Shopping Cart

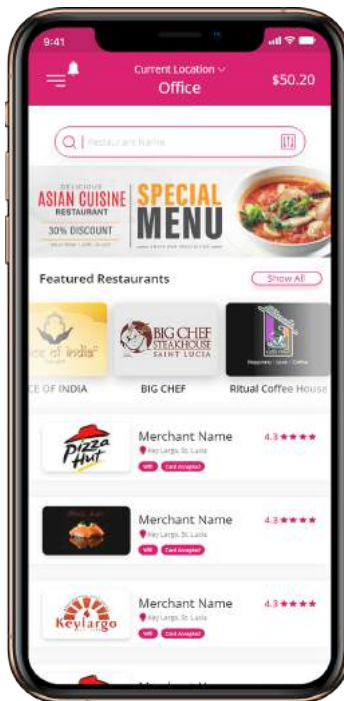

Before checking out, review all the food items that you have ordered and add any special instructions or promo codes.

### Payment

Different payment gateways integrated within the application to facilitate real-time online payments.

### Rate & Review

Foodies can leave their comments and reviews based on their experience of different restaurants

## Technology Stack

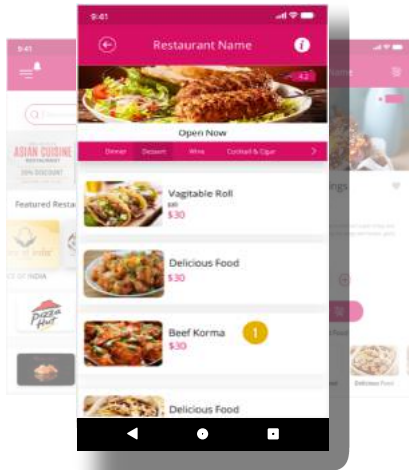

QuickDelivery makes food delivered right at your doorstep anytime anywhere. Not only does it allow 24/7 delivery for the foodies, but restaurants benefit from the online platform as well, allowing them to increase their presence and an overall reach.

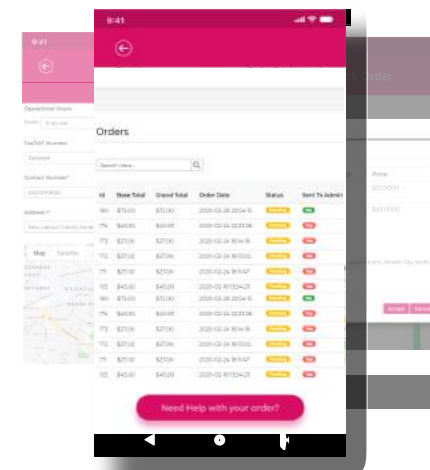

## How it works

### 1 Interface For Foodies

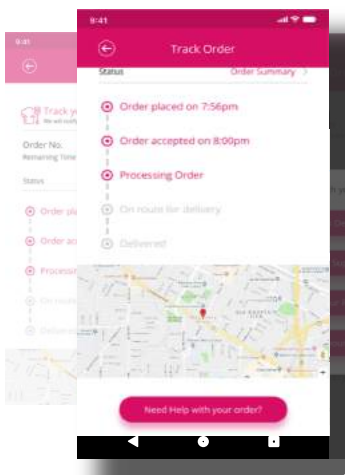

Mobile and web application for foodies where they can order online from a range of restaurants registered with QuickDelivery

### 2 Merchant Dashboard

A desktop portal for restaurants where they receive the online food orders and accept/reject the orders

### 3 Riders Application

Accepted orders are directed to the nearest riders and upon acceptance their rides are tracked from order pickup to delivery

### 4 Admin Dashboard

Reports based on the rich data helps build statistical analysis regarding performance of restaurants, order patterns of foodies, and efficiency of delivery riders.
